

106 RM RANGE 105-107

TMF SILAGE

KEY STRENGTHS

- Tall hybrid with a full canopy that produces high tonnage and consistently girthy ears.
- Widely adapted east to west, and it offers good tolerance to gray leaf spot.
- Excellent emergence and early vigor.
- Very good starch levels.
- Excellent eye appeal, roots and fall staygreen.

CHARACTERISTICS CHART

MANAGEMENT GUIDELINES

- Recommended for silage, earlage and high-moisture corn use within its adapted maturity.
- Excellent plant agronomics will support moderate-high to high plant densities, especially under irrigated production.
- Above- and below-ground insect protection provides consistent performance over years and environments.
- Will benefit from fungicide application if heavy disease pressure is expected.
- A strong fertility program for silage production is important to maximize tonnage and maintain the quality of the silage.
- Requires no separate, structured insect refuge in the Corn Belt. The refuge required is incorporated in the bag.
