CHARACTERISTICS CHART

MANAGEMENT GUIDELINES

- Recommended for silage, earlage and high-moisture corn.
- Good performance at low to high plant populations.
- Good performance from east to west.
- A strong fertility program for silage production is important to maximize tonnage and maintain the quality of the silage.
- Monitor harvest moisture closely as harvest approaches. Hybrids may be drier or wetter than physical appearance indicates.
- When storing TMF hybrids in a pile or a bunker, recommended moisture levels for harvesting range from 65 percent to 68 percent moisture; for bags, 62 percent to 68 percent.
